

BUGGY CAM

Capture your shots from a brand new perspective with the Flyonix Buggy Cam.

Getting Those Low-Level Shots: The Buggy has been built with those low angles in mind, allowing the operator to capture the perfect shots at both high and low speeds.

Multiple Camera Setups: The Buggy Cam features an anti-vibration system and customised mounting plate, meaning you can quickly attach a variety of camera mounts and gimbals without fuss.

FPV System: The integration of an FPV System allows you to get a front-seat view from as far as 500 metres away (environment depending) and offers yet another unique angle from which to capture shots.

Available for Dry Hire: Contact us for more info.

Specifications

Dimensions:

790 x 460 x 255mm

Max. Payload:

6kg Camera and Lens

FPV Distance:

**500 metres
(distance can vary)**

Speeds:

Can achieve up to 50mph

Battery Run Time:

Up to 4 hours normal use

Weather Restrictions:

Extreme Rain
